

# Times

**Year 2 Spring Term Week 11**

**Lesson 2**

# Today we will be learning to:

- use and understand words about time
- read the time to the o'clock and half past on different types of clock
- solve simple problems relating to time.

# Mental Activity

What do we know about the number 5?

Is it odd or even?

What are four lots of 5?

What is double 5?

How many years ago were you five years old?

# Main Activity

Today we are going to be looking at  
clocks

and how to tell the time.

What do you know about clocks?

What is the difference  
between an **analogue** clock  
and a **digital** clock?

An **analogue** clock  
has hands. A **digital**  
clock uses only  
numbers.

If I was an alien from outer space  
and didn't know what a clock looked like  
how would you describe one for me, so I  
could draw it?

# My analogue clock

# Group Work

Sit in groups with children you do not normally work with.

You are going to make your own clock.

Make sure you have a clock face to look at.
