

Understanding Multiplication and Division

Year 2 Summer Term Week 11

Lesson 2

Today we will be learning to:

- use division and multiplication
 - use multiplication and division vocabulary
 - understand the idea of something left over
 - use the correct number operation
 - solve money problems.
- 

Mental Activity

What's my number operation?

One pupil wears a headband with a number operation written on it.

This pupil says a number to the class.

The class multiplies that number by the number operation on the headband.

The class call out the answer.

The pupil wearing the headband
guesses the number operation
that is written on the headband.

Main Activity

Today we are going to

share out coins between different
numbers of children

and work out how much they each get.

I will take a handful of 1p coins.

How many coins are there?

How much money is that?

I want to share this money equally
between two children.

How much will they each get?

How did you work it out?

How can we check?

What does 'share equally' mean?

Making sure that everyone
gets the same amount.

Share equally

How could we do this?

What should be done with any leftovers?

If I share the same handful of coins
between three children

will they each get more or less than
the two children did?

Why?

You can share out 1p coins using 2 lines.

6 coins between 2.

6 coins between 2.

6 coins between 2.

6 coins between 2.

6 coins between 2.

Three 1p coins each.

What is the number sentence for this?

You can share out 1p coins using 3 lines.

13 coins between 3

13 coins between 3

13 coins between 3

13 coins between 3

13 coins between 3

13 coins between 3

Four 1p coins each and one 1p left over.

What is the number sentence for this?

Now we are going to do the same
with $2p$ coins.

I will take a handful of 2p coins.

How many coins are there?

How much money is that?

I want to share this money equally
between two children.

How much will they each get?

How did you work it out?

How can we check?

If I share the same handful of coins
between three children

will they each get more or less than
the two children did?

Why?

You can share out 2p coins using 2 lines.

6 coins between 2.

6 coins between 2.

6 coins between 2.

6 coins between 2.

Three 2p coins each.

How much money is this?

What is the number sentence for this?

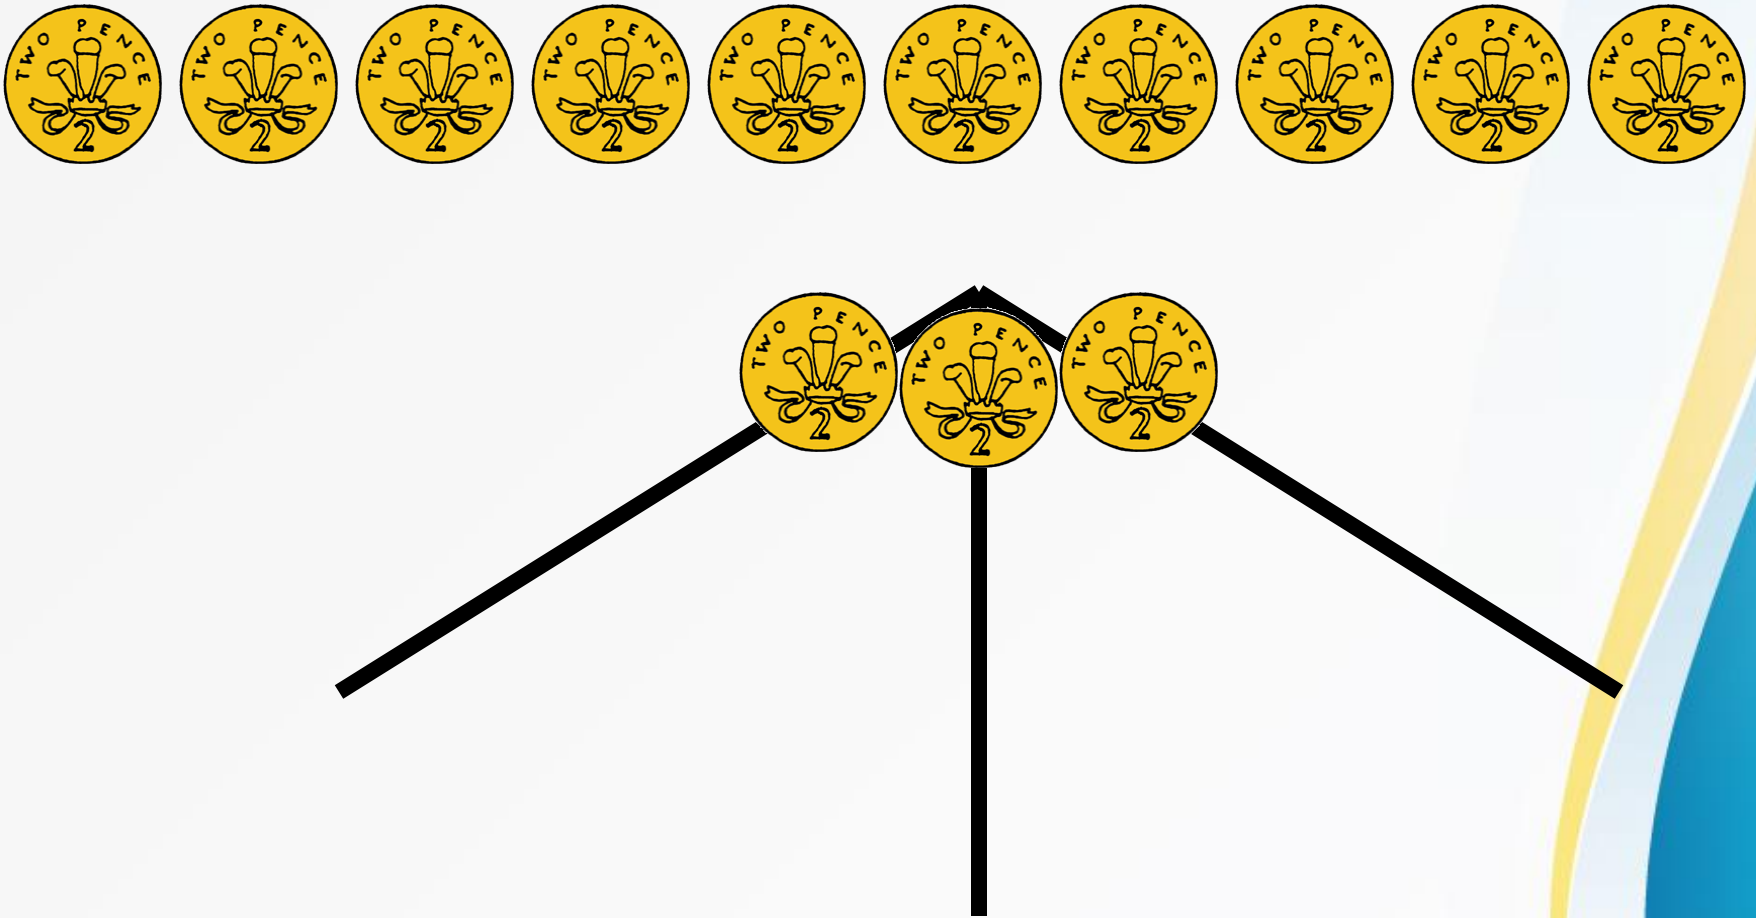

You can share out 2p coins using 3 lines.

13 coins between 3

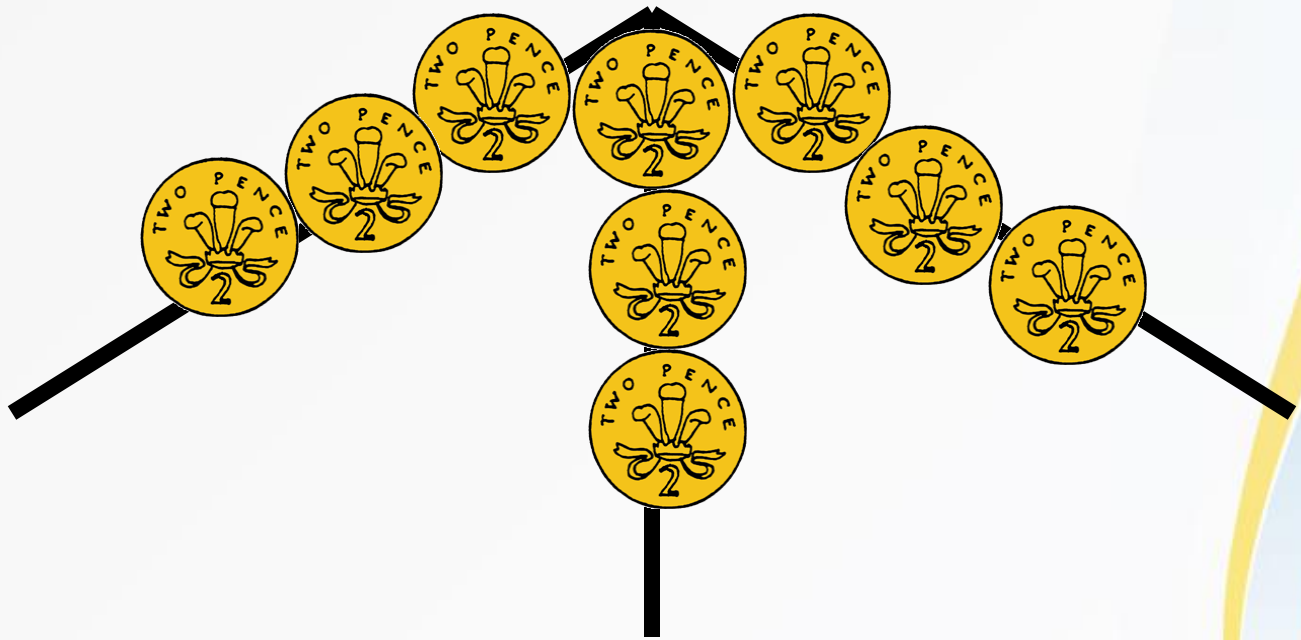

13 coins between 3

13 coins between 3

13 coins between 3

13 coins between 3

Four 2p coins each and one left over.

How much money is this?

What is the number sentence for this?

Group Work

Share out a handful of 1p coins equally and work out how much each child gets.

Share out a handful of 2p coins equally and work out how much each child gets.

Share out a mixture of 2p and 1p coins equally and work out how much each child gets.
